

SUMMARY OF INTERVIEW

Exhibits and/or Demonstrations

None.

Identification of Claims Discussed

Claim 1.

Identification of Prior Art Discussed

None.

Proposed Amendments

Incorporation of claim 2 into claim 1.

Principal Arguments and Other Matters

Applicants' stated that the recitation of "directions that are orthogonal to each other", combined with amendment of Figure 1 to show the two orthogonal directions, was neither vague nor indefinite, and stated that they would present evidence that the term "orthogonal" can be used in mathematics to refer to the relationship between rotational and axial relative movement. Alternatively, Applicants' representatives stated that they would incorporate claim 2 into claim 1 which would avoid use of the term considered indefinite. The latter option was chosen, solely to expedite allowance of the application.

Results of Interview

The Examiners indicated that either of the options discussed at the interview would be favorably received.
